### DETAILED ACTION

1. This office action is responsive to the following communications: Application, filed 06/02/2000; IDS, paper #4, filed 02/13/2001; IDS, paper #5, filed 09/05/2001; IDS, paper #6, filed 06/06/2001; Amendment A, filed 03/24/2003.
2. Claims 1, 5-14 and 16-22, and 24 are pending in this application.
3. The present title of the application is "Variable Bit Field Encoding" (as originally filed).

### *Claim Rejections - 35 USC § 101*

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1, 5-14 and 16-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims that are noted above as being rejected but that are not specifically cited below are rejected based on their dependency on rejected independent claims as incorporating the errors of those claims and not imparting any features leading to statutory subject matter.

Regarding claims 1 and 5, the claim recites "a storage medium storing plural image elements that together represent an image . . .", and "a computer graphics system including a storage device . . ." The disclosed invention has a practical application, e.g., the storage of data element representing an image. However, the

Art Unit: 2672

steps of the method do not recite any post-computer process activity, i.e., no independent physical acts, and the steps of the method do not recite any pre-computer process activity, i.e., no manipulation of data representing physical objects or activities.

Regarding claim 14, the claim recites an encoding format, however the recited claim merely discloses an abstract idea.

Regarding claim 18, the claim recites "a method of representing an image with multiple data element . . .", however it is not within the technological arts.

Regarding claim 21, the claim recites "an alpha component converter . . .", however fails to disclose post-computer activity.

Therefore, in order to determine if the process is statutory, one must determine what the computer does to achieve a practical application. A process that merely manipulates an abstract idea is non-statutory despite the fact that it might inherently have some usefulness. For such subject matter to be statutory, the claimed process must be limited to a practical application of the abstract idea. Examiner finds no limitation to a practical application for the claimed method. The nonfunctional descriptive matter could be a page stored on a storage medium. The preamble of the claim is given little weight in establishing a statutory claim when there are no elements in the claim limitations into which the preamble could give substantial meaning of a practical limitation. Therefore, when taken as a whole, the claim recites manipulation of an abstract idea. See *In re Schrader*, 22 F.3d 290, 30 USPQ2d 1455 (Fed. Cir. 1994), and *In re Warmerdam*, 33 F.3d 1354, 31 USPQ2d 1754.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1, 2, 5-14, and 16-22 have been considered but are moot in view of the new ground(s) of rejection.
